

Village Milk Corrections

Admin Page

- Add single day and range filters to all data/history pages. Data should dynamically change based on the selected filters, especially on dashboards.
- Ensure dropdowns for Center ID, Society Code, and Vessel ID are present in all applicable pages.
- Display vessel collected data (as updated by the driver) distinctly and accurately.
- Refine the checker page UI and functionality as capable to find where the issue raised (by the collectors or drivers).
- Include filters (Society Code, Pincode, Center ID) in all relevant pages, such as procurement data from farmers and centers.
- Display variation percentages post-checker verification. Admin should set and manage allowed variation percentages.
- Fix table headers to prevent scrolling and implement pagination on all pages with tabular data.
- Verify and document milk amount calculations.
- Add user creation component for Admin and Collectors (with access restrictions for collectors to create only farmer accounts).
- Standardize the design and behavior of edit popups across all pages.
- Introduce a view popup in all relevant pages.
- Enable identification of issue source (collector or driver) during quality checks.
- Fully implement the ticket/issue reporting system.
- Add acknowledgment of payment status, including reasons for non-approval.
- Eliminate duplicate entries in the user list page.
- Mandate payment proof attachments when transferring money to farmers.

Farmers Page

- Separate and display total paid and unpaid amounts clearly.

Collectors Page

- Remove total procurement amount display across all collector pages.
- Rename the submit button to 'Collected' on the milk entry (receive milk) page.
- Add a manual entry form for procurement from farmers.
- In the farmers list under batches, add search functionality and a view details button.

Common

- Implement alternating row background colors (e.g., different colors for even and odd rows).
- Fix total value display position on all pages.
- Add profile images for users (camera upload only; no gallery uploads).
- Implement tracking animation for drivers and store tracking data in the database, including historical tracking data.

Checkers Page

- Display percentage differences in the verify page.
